

PECR: from probes to risk

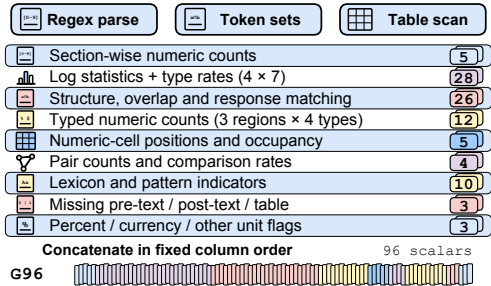

1 Program-conditioned probing

Question + evidence $\rightarrow$ program-mapped operand edits

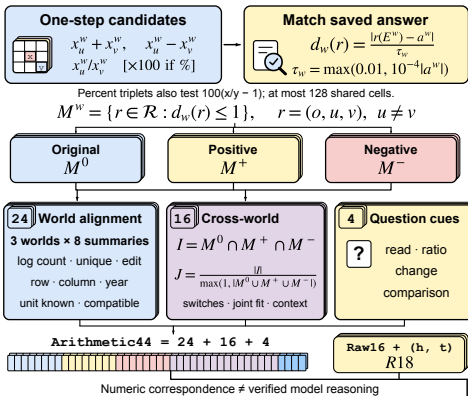

2 Typed original-side feature extraction

Original input and its generation-aligned answer

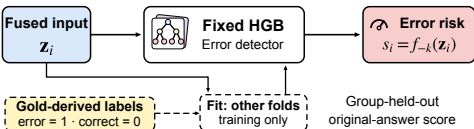

3 Arithmetic response-evidence alignment

Three worlds, numeric answers and edited-cell coordinates

4 Original-answer error risk

$\mathbf{z} = \text{concat}(\mathbf{G96}, \mathbf{R18}, \mathbf{Arithmetic44}) \in \mathbb{R}^{158}$

G96 $\cdot$ original-side features

Three worlds + responses + edit coordinates
